

# KRUGERSDRIFT DAM SCHEME

## LOCATION

The Krugersdrift Scheme is located on the Modder River downstream of Krugersdrift Dam (quaternary C52G).

## DESCRIPTION

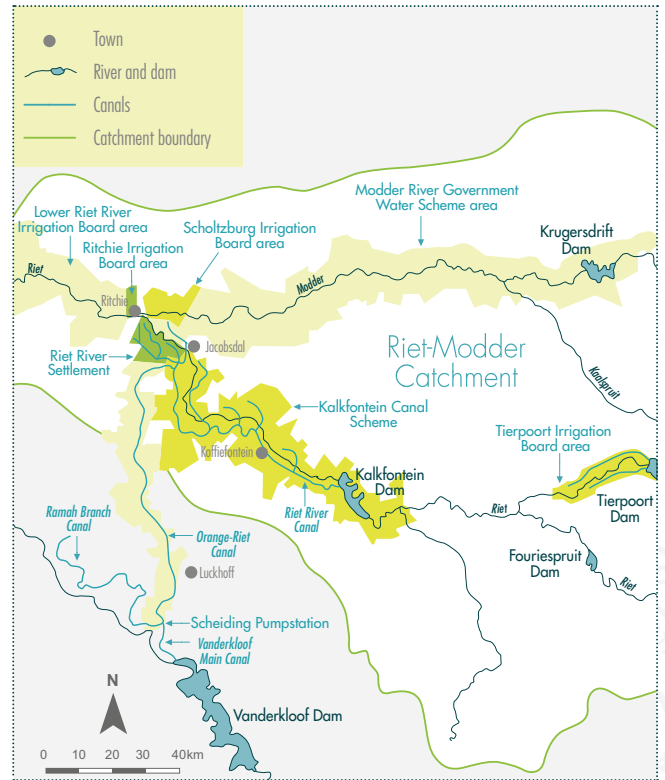

The scheme consists of Krugersdrift Dam, which is located on the Modder River, as well as approximately 55 storage weirs along the lower Modder River.

## PHYSICAL INFORMATION

The Krugersdrift Dam is the only dam in the scheme, with a full supply capacity of 73 million m<sup>3</sup>. It has a wall height of 3 114 m and length of 4 820 m. The spillway capacity of the dam is 4 820 m<sup>3</sup>/s. (The capacities of the weirs vary in size from 5 000 m<sup>3</sup> to 1 million m<sup>3</sup>).

## PURPOSE

The scheme supplies water to the Modder River Government Water Scheme for irrigation purposes, which is located further downstream of the dam. Water is abstracted from the weirs located on the Modder River.
